

Search v0.4

Search version 0.4

Start date: 12 Jul 2018 ; **release date:** 18 Jul 2018

Source code: <https://github.com/cul-it/arxiv-search/releases/tag/0.4>

This release fixes a variety of bugs reported since the release of search-0.3, and introduces a few minor requested features.

Features

- Ability to hide abstracts in search result.
- Add 25 results as an option in search (leave 50 as default)
- Offer full text and help pages as options in simple search
- Make "back" link on search results more prominent/obvious
- Support searches for seven-digit arXiv ID partials
- Query date ranges should be inclusive
- Simple search provides shortcut URL routes that limit search to a specific group or archive
- Search links from browse for archives, and for author name search, use group/archive shortcut routes provided by simple search
- Filtering search on submission date should apply to all versions by default

Bugs

- A handful of specific searches are causing unexpected errors.
- Author names are not parsed correctly when they are separated by both commas and the word "and".
- If the search includes a term that starts with a wildcard, a 500 error is returned.
- Some papers not responding in all-fields search that really should.
- Unexpected discrepancy between author name searches that individuate name parts and those that do not.
