Approaches for CLI, SSH, and RDP Access to AWS and AWS Resources

The pages contains tools and approaches to accessing AWS resources deployed in Cornell AWS accounts and to executing AWS APIs. This information was compiled as CIT teams realized the need for "air gapped" workstations or platforms to work with controlled data and systems. Some of these options may be appropriate replacements to the on-premise, controlled access systems currently being used for tools workstations or utility servers.This information is compiled into a Google Sheet, publicly viewable: https://docs.google.com/spreadsheets/d/1JQZw2uNguQ8NmMlcsBUVkmSx-E_chd1hZ2lR4BKFtlc/edit?usp=sharing
