

Configure Oracle RDS to Use AWS SES SMTP

Configuring Oracle RDS instances to use AWS SES SMTP is not a trivial process. This page pulls together some documentation that might be helpful if you are trying to do that.

Notes

You will need to Oracle "orapki" tool for this. You can find that tool in the "Oracle Fusion Middleware Infrastructure" Docker Hub image: [store/oracle/fmw-infrastructure:12.2.1.3-200127](#). You will need to login to Docker Hub and accept it's terms of use before pulling that image.

```
$ docker login
$ docker pull store/oracle/fmw-infrastructure:12.2.1.3-200127
$ docker run -it --rm -u root -v $(pwd):/mounted_files store/oracle/fmw-infrastructure:12.2.1.3-200127 /bin/bash
bash-4.2# ls /u01/oracle/oracle_common/bin/orapki
/u01/oracle/oracle_common/bin/orapki
bash-4.2#
```
