

Configure Oracle RDS to use AWS SES for SMTP

There are quite a few steps involved with configuring Oracle running in RDS to use Simple Email Service (SES) for sending email over SMTP. Here are a few resources that Cornell AWS users have found useful:

- [Provisioning Oracle Wallets and Accessing SSL/TLSBased Endpoints on Amazon RDS for Oracle \(PDF\)](#)
- AWS Discussion Forum: [Trouble with Provisioning Oracle Wallets and Accessing SSL](#)
- [Configuring Oracle RDS for sending emails using Simple Email Service \(SES\)](#)

The approach in this last article didn't work exactly as is from our experience, but it may still have useful information for Cornell folks.
