

# Using the Local Schemas on the Cornell LDP

These are guidelines for using the Local Schemas on the Cornell LDP (Library Data Platform) reporting database. All users have access to create and delete tables on LDP local schemas, so it is important to be careful to follow the guidelines for using them.

Schema	Usage Guidelines	Where Schemas Implemented
local	The local schema is available to all reporting users. Please precede any tables you create in this schema with your netid, as in netid_mytable.	LDP Test and LDP Production
local_automation	This schema is used by the Automation Team.	LDP Production only
local_core	This schema is used by the Reporting Team.	LDP Test and LDP Production
local_digpres	This schema is used by the HathiTrust team.	LDP Production only
local_hathitrust	This schema is used by the HathiTrust team.	LDP Production only
local_protected	This schema is used to store tables capturing daily updates that cannot be deleted	LDP Test and LDP Production
local_statistics	This schema is used by the Assessment and Planning team.	LDP Production only
