

Specifying Ranges

Specifying a Range of HRIDs from

Each instance, holding, and item has an HRID (Human Readable ID number) associated with it, e.g. holdings HRID 10171484.

If you want to specify a range of HRIDs in your report results, you can use

```
SELECT
    ih.hrid AS holdings_hrid
FROM
    inventory_holdings AS ih
WHERE
    ih.hrid:: INTEGER BETWEEN '454390' AND '454393'
;
```

Keep in mind that INTEGER BETWEEN will only work with numeric HRIDs. CUL HRIDs are exclusively numeric.

Here is an example for Specifying a Range of HRIDs if you are using a MARC table

```
SELECT
    SM.field,
    SM."content",
    II.hrid
FROM
    public.srs_marctab SM
INNER JOIN public.inventory_instances AS II ON
    SM.instance_hrid = II.hrid
WHERE
    II.hrid::INTEGER BETWEEN '15077113' AND '15077535'
    AND SM.field = '000'
ORDER BY
    II.hrid;
```
