

Capturing diacritics in exporting data

This solution came from Eric Pennington:

1. Export your query results to CSV (**not Excel**)
2. Open a blank Excel workbook
3. Go to the Data tab and select Get data from Text/CSV
4. Navigate to your CSV file and click Import
5. You will see a configuration window that displays your data. Set the **File Origin** dropdown to **65001 Unicode UTF(8)**.
6. Click Load. You should see your data displaying correctly with diacritics
