

BIB Formats

This list of format codes comes from the BIB_FORMAT_DISPLAY table in Voyager. In Folio, the codes are those found in the leader field of the instance record (field 000), in position 7, with 2 characters. To extract the code in a Postgres query, use the substring command on the content field of the srs_marctab table: SUBSTRING (srs_marctab.content, 7, 2) where srs_marctab.field = '000'
