

# Browsing Photos in AFS on Windows

The built in Windows10 Photos app will often fail with a "Permission Denied" error. One can work around this problem by using the classic Windows Photo Viewer app.

## CNF Windows

We have re-enabled the Windows Photo Viewer application for use. To open a photo with it:

1. Browse to the folder containing the photo you wish to open
2. Right click the photo and choose *Open With*
3. You will see a list of apps. If *Windows Photo Viewer* is not one of the options (not to be confused with *Photos, Paint, Paint3D*), also choose *Choose another app*
4. Select *Windows Photo Viewer*
5. The picture will open in the classic Windows Photo Viewer app.

## Personal Windows

You will need to re-enable the Windows Photo Viewer application. [This TechRadar article has good instructions](#). Note the instructions differ slightly depending on whether your Windows install is a clean Windows10 install or an upgrade install from Windows 7/8. For the clean install instructions, scroll down further in the article.
