

# 2024-01-18

## Attendees:

- Ann Crowley
- Tom Trutt
- Jenn Colt
- Tobi Hines on behalf of Andy Horbal
- Vandana Shah
- Jesse Koennecke
- Simeon Warner
- Emily Zinger
- Laura Daniels
- Courtney Dalton

## Regrets:

- Debra Howell

## Agenda:

- Support/Security Team Updates - Tom
  - Poppy upgrade schedule
    - Note: not implementing Token Refresh in Poppy as planned, so not a big change for us
- Reporting
  - MetaDB role out schedule: [Metadb Rollout Plan](#)
- Anything from CC/PC/TC - Simeon/Jesse/Jenn
  - CC -
  - PC -
  - TC -
- Cornell JIRA for priorities: <https://culibrary.atlassian.net/jira/software/projects/FOLIO/boards/108>
  - Does this still make sense? Seems like flagging JIRAs is no longer effective or sustainable. We should focus on "areas" of improvement - like bulk edit and data import (DLH).
- Sharing with everyone but I think especially for @Debra Howell @trutt.tom @jenn\_colt. There is a proposal from Index Data called "Inventory Importer" <https://cornell.app.box.com/file/1408437030508> (local copy that we can scribble on) that they have worked on with Chicago. Putting the quite significant cost to one side for a moment: Is this something we would like to see happen? Are there change we would like to see to the approach? How do you see it in relation to EBSCO's work on Data Import?
- Updates on eUsage and OpenAccess apps; updates, issues, progress.
- Open discussion time - new business?
