Automated Design Tool

We don't design each plant from scratch. Instead, we do research to understand the fundamental processes of water treatment and invent scalable, reproducible tools that can be combined to form a complete water treatment plant. Then, our Automated Design Tool does exactly that. The ADT is free software that allows users to receive customized AutoCAD plant designs based on inputs like flow rate and region of the world.

Accessing the Automated Design Tool

In keeping with AguaClara's philosophy of [open design](#) the Design Tool source is now available for use via an online interface [here](#). You will need updated versions of AutoCAD in order to use the files that the Design Tool will send to you.
