Test URLs

Development URL	Deployed URL	Expected Response	Notes
http://localhost/ws/ref/country	http://ebird.org/ws1.0/ref/country	entire list in CSV format	Generates 404
http://localhost/ws/ref/country/list	http://ebird.org/ws1.0/ref/country/list	entire list in CSV format	"csv" is the default format.
http://localhost/ws/ref/country/list?format=xml	http://ebird.org/ws1.0/ref/country/list?format=xml	entire list in XML format	
http://localhost/ws/ref/country/list?format=csv	http://ebird.org/ws1.0/ref/country/list?format=csv	entire list in CSV format	
http://localhost/ws/ref/country/list?format=QQQ	http://ebird.org/ws1.0/ref/country/list?format=QQQ	entire list in CSV format	Bad format value is ignored and defaulted to csv.
http://localhost/ws/ref/country/list?format=XML	http://ebird.org/ws1.0/ref/country/list?format=XML	entire list in CSV format	"XML" is not a valid format option. Only "xml" and "csv" are valid options.
http://localhost/ws/ref/country/find?match=united	http://ebird.org/ws1.0/ref/country/find?match=united	list of countries in CSV format	
http://localhost/ws/ref/country/find?match=united&format=xml	http://ebird.org/ws1.0/ref/country/find?match=united&format=xml	XML list of countries	
http://localhost/ws/ref/country/find?match=UNITED	http://ebird.org/ws1.0/ref/country/find?match=UNITED	list of countries in CSV format	There should be no difference in response for upper/lower case search strings.
http://localhost/ws/ref/country/list?format=	http://ebird.org/ws1.0/ref/country/list?format=	entire list in CSV format	Bad format value is ignored and defaulted to csv.
http://localhost/ws/ref/country/find?match=	http://ebird.org/ws1.0/ref/country/find?match=	empty list in CSV format	

CSV Result Format

```
<country code>, <name associated with country code>
<country code>, <name associated with country code>
<country code>, <name associated with country code>
```

XML Result Format

```
<response>
  <header>
    <locale country="US" language="en" />
    <timestamp>2008-02-21T12:37:32.546-05:00</timestamp>
    <criteria>
      <property name="match" value="something" />
    </criteria>
    <comment>
    </comment>
  </header>
  <result>
    <location countryCode="" >name of the country </location>
    <location countryCode="" >name of the country </location>
    <location countryCode="" >name of the country </location>
  </result>
</response>
```
