## Notable eBird Sightings Web Service API and Gadget

- [Notable eBird Sightings Web Service API and Gadget](#)
  - [Gadget](#)
  - [API](#)
    - [Parameter Descriptions](#)
    - [Result Caching](#)
    - [XML Result Format](#)
  - [Potential Enhancements](#)

### Gadget

### API

URL	description	status	notes
<a href="http://ebird.org/ws1.0/data/notable/recent?subnational1Code=US-PA&amp;subnational1Code=US-NY">http://ebird.org/ws1.0/data/notable/recent?subnational1Code=US-PA&amp;subnational1Code=US-NY</a>	returns notable sightings for the given state(s)	deployed	
<a href="http://ebird.org/ws1.0/data/notable/recent?countryCode=US&amp;countryCode=CA">http://ebird.org/ws1.0/data/notable/recent?countryCode=US&amp;countryCode=CA</a>	returns notable sightings for the given country (ies)	deployed	

### Parameter Descriptions

parameter	required	default	value options	example value	description	status
subnational1Code	either subnational1Code or countryCode is required	n/a	Valid subnational codes are available from <a href="#">AKN-1.0-Subnational1</a>	US-PA	There is no limit to the number of subnational1Codes that can be provided in one request. However, subnational1Code and countryCode parameters cannot be provided in the same request. If both are provided, the subnational1Code parameters are ignored.	deployed
countryCode	either subnational1Code or countryCode is required	n/a	Valid country codes are available from <a href="#">AKN-1.0-Country</a>	US	There is no limit to the number of countryCodes that can be provided in one request. However, subnational1Code and countryCode parameters cannot be provided in the same request. If both are provided, the subnational1Code parameters are ignored.	deployed
locale	no	en_US	Java standard locale codes	en_US	Language/locale of common names to be provided in the response (when translations are available). This also specifies the language used in the description of the sighting.	deployed

### Result Caching

Results are cached on the server for 30 minutes, so repeated calls to the same URL will usually result in exactly the same response. The time that the response was actually computed is provided in the header time stamp.

### XML Result Format

```

<?xml version="1.0" encoding="UTF-8"?>
<response> - <header>
  <locale country="US" language="en"/>
  <timestamp>2008-07-11T14:59:00.659-04:00</timestamp> - <criteria>
    <property id="subnational11Code" value="US-NY" description="New York"/>
    <property id="subnational11Code" value="US-PA" description="Pennsylvania"/>
  </criteria>
  <comment/>
</header> - <result> - <notable-sighting>
