Start-Up & Preliminary Set-Up

Set the *redAnTS_Toolbox/InputOutputFiles* folder as your Current Directory by browsing to it using the browse button near the top of the MATLAB window. Since you have already set the path in the [introductory tutorial](#), simply enter `redAnTS` at the MATLAB prompt to launch *redAnTS*:

```
>> redAnTS
```

Resize this browser window and rearrange the windows such that browser and *redAnTS* GUI are side-by-side as shown [here](#). This makes it convenient to read instructions in the browser window and implement them in the GUI.

Glance to the right of the [Controls](#) menu to see the [Current Settings](#). Currently, there are no settings and *redAnTS* is twiddling its thumbs anticipating a mesh. So let's move on step 2 to generate a mesh using the CSG Mesh Tool.

[Go to Step 2: Generate Finite-Element Model](#)

[Go to all MATLAB Learning Modules](#)
