

CEE 3090 Course Descriptions

CEE 3090 Special Topics in Civil and Environmental Engineering (variable credits)

Instructor: M.L. Weber-Shirk

No prerequisite

This is the same as the [Summer Internship](#). See that page for more description.

CEE 3090 allows students to work on the AguaClara project during the summer and will count towards credit in the following fall semester as an advisor approved elective or an extra course. It is required that you submit a written report early in the fall semester and sign a volunteer form if you wish to participate in the summer internship.

Individual expectations and coursework will be decided on with faculty at the beginning of the summer. Depending on the student's previous involvement with AguaClara, CEE 3090 will be similar to either [CEE 2550](#) or [CEE 4550](#).

For international students, please see the [PIRIP](#) program website for more details.
